RE: Site Inspection, Larson Limestone Quarry, M/049/011, Utah County, Utah

Date of Inspection: October 1, 1996
Time of Inspection: 9:00 am
Conditions: clear
Participants: Mark Hartman, Larson Limestone; Patrick Collins, Mt. Nebo Scientific;
Tony Gallegos, Tom Munson, and Lynn Kunzler, DOGM

Purpose of Inspection: Review site conditions, permit status, and discuss permit deficiencies

We began this inspection with a discussion in the office as to the status of the Division's review of the Notice of Intention. Deficiencies were discussed and explained in more detail. We then took a tour of the Quarry.

Quarry conditions have not changed much since the last inspection. Mr. Hartman indicated that the next 5-10 years, the plan is to deepen the pits, which will create very little new disturbance. This plan will also reduce some of the dump slopes that currently exist. He also indicated that if his company gets the I-15 contract or if the legacy highway gets approval there production could greatly increase.

The need for accurate maps was also discussed. These maps need to show the current disturbance, proposed new disturbance, and those areas that were disturbed and abandoned pre-law (1977). We also discussed bonding requirements briefly, and the types of tasks that would be required for calculating the bond, such a structure removal (including foundations), highwall reduction/stabilization, regrading, ripping, seeding,
